## Information about Copyrighted Content

Some instruments administered for studies archived with ICPSR may contain in whole or substantially in part contents from copyrighted instruments. Reproductions of the instruments are provided as documentation for the analysis of the data associated with this collection. Restrictions on "fair use" apply to all copyrighted content. More information about the reproduction of copyrighted works by educators and librarians is available from the United States Copyright Office.

### NOTICE

#### WARNING CONCERNING COPYRIGHT RESTRICTIONS

The copyright law of the United States (Title 17, United States Code) governs the making of photocopies or other reproductions of copyrighted material. Under certain conditions specified in the law, libraries and archives are authorized to furnish a photocopy or other reproduction. One of these specified conditions is that the photocopy or reproduction is not to be "used for any purpose other than private study, scholarship, or research." If a user makes a request for, or later uses, a photocopy or reproduction for purposes in excess of "fair use," that user may be liable for copyright infringement.

### **Variable Description and Frequencies**

**Note: Frequencies displayed for the variables are not weighted. They are purely descriptive and may not be representative of the study population. Please review any sampling or weighting information available with the study.**

**Summary statistics (minimum, maximum, arithmetic mean, median, mode, and standard deviation) may not be available for every variable in the codebook. Conversely, a listing of frequencies in table format may not be present for every variable in the codebook either. However, all variables in the dataset are present and display sufficient information about each variable. These decisions are made intentionally and are at the discretion of the archive producing this codebook.**

**YEARQ\_ORIG: ORIGINAL YEAR AND QUARTER OF INTERVIEW (YYYY.Q)**

Notes: Source code: ICPSR\_YEARQ

Notes: This year and quarter variable is formatted YYYY.Q where Q is 1, 2, 3 or 4. Only valid for 2016 revised data that includes cases from 2015 and 2016. Cases for all other years are coded as 'Out of Universe.' It allows for easier sorting and matching of data files. In the 2016 revised data, this is the original coding for all cases.

## IDHH: NCVS ID FOR HOUSEHOLDS

Notes: Source code: ICPSR\_IDHH

Notes: ICPSR added this variable to facilitate matching of data files. The ID for households is unique within a six month interview period. Given the rotating panel design of NCVS, a value of IDHH may appear in a year of data one, two, or three times. The variables YEARQ and IDHH uniquely identify a household at a given interview within the NCVS.

## V2004: SAMPLE NUMBER

Notes: Source code: Sample

Notes: Two-digit code used to identify the sequence and source of selection of sample housing units. See section - Census Sample Information.

Notes: Because of the coronavirus pandemic the Bureau of Justice Statistics decided not to attempt interviews for incoming

households with a Time in Sample (TIS) value of 1, from April 1-September 30, 2020. Those households are excluded from the file. This means that there are no cases where SAMPLE=19 for YEARQUARTER=202. In addition, the only cases where SAMPLE=19 for YEARQUARTER=203 are cases that were first in sample in Quarter 1, 2020 (TIS=1 for YEARQUARTER=201).

## V2005: SCRAMBLED CONTROL NUMBER

Notes: Source code: Scrambled Control Number

Notes: Beginning with the quarter 1, 2015 NCVS PUF, Census used the 2010 sample design control number scrambling routine to scramble control numbers for 2010 sample design cases. Beginning with the quarter 1, 2006 (YEARQ = 2006.1) NCVS data files, Census used the 2000 sample design control number scrambling routine to scramble control numbers for 1990 and 2000 sample design cases. Therefore, data users will not be able to match 1990 sample design cases on NCVS data files released for quarter 1, 2006 and beyond (YEARQ >= 2006.1) to 1990 sample design cases on NCVS data files prior to quarter 1, 2006 (YEARQ <= 2006.1). Scrambled control was expanded to 20 characters in 2005 Q1. Consequently it was defined as a string variable. Beginning in July 1986 the previously used PSU, segment number, check digit and serial number are scrambled

together by the Census Bureau as one variable to preserve confidentiality. For 1980 sample-first 10 digits -- last four digits are blank (through quarter 4, 1995). For 1990 sample-all 14 digits are used (beginning quarter 3, 1995). Scrambled control number (part) - See V2007 for last two digits of scrambled control number.

## V2006: HOUSEHOLD NUMBER

Notes: Source code: Household Number

Notes: This number identifies the sequence of households that occupy a particular address. For example, if a new family moves into a sample unit being interviewed for a second time, the household number will be "2" indicating that this is a different household from that previously interviewed.

## V2007: LAST TWO DIGITS OF SCRAMBLED CONTROL NO. (END 2004 Q4)

Notes: Source code: Extra Scram

Notes: This variable ended in quarter 4, 2004. Beginning quarter 1, 1996 this field became blank (reserve). Prior to 1996 this field contained the last two digits of the scrambled control number for 1980 sample design cases. For quarters 3-4, 1995 this field was blank for all 1990-based sample cases.

## V2128B: TYPE OF SEGMENT (SAMPLING FRAME) - 1990 SAMPLE (START 1995 Q3)

Notes: Source code: TYPE SEG. In the 2010 design, we use sampling frames instead of segments. For consistency with previous documentation, we still use the source code TYPE SEG and item name Type of Segment. Code reflects 2000 sample design values for 1990 and 2000 sample design values for 1990 and 2000 sample design cases beginning quarter 1, 2006. Code reflects 1990 sample design for 1990 sample cases (beginning quarter 3, 1995).

Notes: This variable started in quarter 3, 1995.

## V2129: MSA STATUS

Notes: Source code: 2000 CBSA MSA/STAT. Prior source code 1990 MSA/STAT. Beginning in quarter 1, 2015, code reflects 2010 geography for 2010 sample design cases and 2000 geography for 2000 sample design cases. Also beginning quarter 1, 2015, values are imputed for ungeocoded units. Code reflects 2000 geography for 1990 and 2000 sample cases beginning in quarter 1, 2006. Code reflects 1980 geography for 1980 sample cases, (through quarter 4, 1995). Code reflects 1990 geography for 1990 sample cases (beginning quarter 3, 1995).

Notes: In quarters 3 and 4, 2005, this field contains the 1990 MSA status for 1990 sample design cases and the 2000 CBSA status for 2000 sample design cases. Beginning quarter 1, 1996 this field is '1990 MSA/STAT'. Prior to quarter 1, 1996 this field was 1980 MSA/STAT.

## TIS: TIME IN SAMPLE (START 2015 Q1)

Notes: Identifies the time in sample based on the panel and rotation group from the rotation chart. 1-7

Notes: Because of the coronavirus pandemic the Bureau of Justice Statistics decided not to attempt interviews for incoming households with a Time in Sample (TIS) value of 1, from April 1-September 30, 2020. Those households are excluded from the file. This means that there are no cases where SAMPLE=19 for YEARQUARTER=202. In addition, the only cases where SAMPLE=19 for YEARQUARTER=203 are cases that were first in sample in Quarter 1, 2020 (TIS=1 for YEARQUARTER=201).

## ADDR\_TIS: ADDRESS TIME IN SAMPLE (START 2015 Q1)

Notes: Source code: ADDR\_TIS

Notes: Identifies the actual time in sample for the address. This will match the value of Time in Sample unless the address came into sample later than its original planned start date. This can occur due to new construction that enters the sample after the rotation group started, sample reductions, sample reinstatements, and implementing new sample designs. 1-7

## HH\_TIS: HOUSEHOLD TIME IN SAMPLE (START 2015 Q1)

Notes: Source code: HH\_TIS

Notes: Identifies the household's time in sample. This will match the value of Address Time in Sample unless the household at this sample unit is replaced. For example, a household is replaced when all the household members move out and a new household moves into the sample unit. This number identifies the current household's time in sample. If the household is replaced, this value starts over at 1. 1-7

## TYPEINTV\_TIS1: HOUSEHOLD TYPE OF INTERVIEW CODE TIME IN SAMPLE 1 (START 2015 Q1)

Notes: Identifies the household's type of interview code for the time in sample (indicated in the source code name, one through seven) based on the panel and rotation group from the rotation chart within a household. Replacement households will not carry the type of interview code from the previous household, but will be set to not applicable for times in sample where this particular household did not exist. Therefore, replacement households will not carry the TYPEINTV codes from the household it replaced. This variable will be set to missing for periods when the household was not in sample. For example, if a household was replaced after the second enumeration, the variable TYPEINTV\_TIS1 and TYPEINTV\_TIS2 would be missing.

## HHBOUNDED: HOUSEHOLD BOUNDED BY PREVIOUS TIME IN SAMPLE (START 2015 Q1)

Notes: Identifies if the household was a complete interview in their previous time in sample. Households who did not complete an interview their previous time in sample are unbounded. Households who did complete an interview their previous time in sample are bounded. Since a household can be interviewed up to 7 times and this value is based solely on the interview disposition of the prior time in sample, this value may change between 0 and 1 several times.
